

T-A Pro®

High Penetration Replaceable Insert Drilling System

► **Diameter Range:** 9.50 mm - 47.80 mm (0.3739" - 1.8820")

The best just got *better*.

After 35 years of spade drilling success with our iconic T-A® (Throw Away) insert, the best just got better. Our team of engineers developed technology that takes The "go-to" solution for general purpose holemaking to a performance level previously unachievable by a spade insert.

The T-A Pro combines material-specific insert geometries, a redesigned drill body, and a proprietary through coolant system to allow penetration rates, which run at speeds faster than other high performance drills.

Excellent chip control

Improves hole quality and surface finish

Provides maximum durability and stability

Your safety and the safety of others is very important. This catalogue contains important safety messages. Always read and follow all safety precautions.

This triangle is a safety hazard symbol. It alerts you to potential safety hazards that can cause tool failure and serious injury.

When you see this symbol in the catalogue, look for a related safety message that may be near this triangle or referred to in the nearby text.

There are safety signal words also used in the catalogue. Safety messages follow these words.

WARNING

WARNING (shown above) means that failure to follow the precautions in this message could result in tool failure and serious injury.

NOTICE means that failure to follow the precautions in this message could result in damage to the tool or machine but not result in personal injury.

NOTE and **IMPORTANT** are also used. These are important that you read and follow but are not safety-related.

Visit www.alliedmachine.com for the most up-to-date information and procedures.

NEW HOLDER DESIGN

Optimised flute design for **increased** chip evacuation

NEW INSERT DESIGN

ISO-specific geometries with a new point design to **simplify** your insert choices

NEW COOLANT DESIGN

Proprietary coolant outlet configuration provides **superior** performance even in low coolant applications 15 BAR (200PSI)

Competitive Test Results

T-A Pro®

TEST RESULTS

Project Profile: Competitive Testing in 4340 Steel
Tooling Solution: T-A Pro: Steel (P) Geometry with T-A Pro Holder

The Parameters:

- Hole Diameter = 14.30 mm (0.5625")
- Depth of Cut = 50.80 mm (2")
- Coolant = 20 BAR (300 PSI)
- Speed = 2546 RPM
- Feed = 420 mm/min (16.55 IPR)

The Results:

When run at the listed parameters, here is how the three different tooling solutions performed:

Competitor 1 = 79.95 total linear meters
Competitor 2 = 93.67 total linear meters
T-A Pro = **109.62** total linear meters

Average Tool Life
 Test Results Drilling in 4340 Steel

Case Study

The Gift that Keeps Giving.

Not everything in life has to be a give and take. Our customer who machines fluid end frac blocks was previously having to reduce cutting parameters to achieve good chip formation and produce a successful part.

Needing better chip formation with a reduced cycle time, the customer tested Allied's **T-A Pro drill**. Using the "M" ISO-specific stainless steel insert geometry – developed for improved chip formation while minimising exit burr – they were able to increase their speed and feed while maintaining ideal chip formation.

On top of the reduced cycle time, the T-A Pro had an increased tool life, lowering the cost per hole by 58.82%. The success of the T-A Pro in this application is just another example of why it is more than just a good drill.

If you are looking for a solution that just keeps giving, **give us a call and we will help you find the right solution.**

Product:	T-A Pro drill	Measure	Competitor Drill	T-A Pro Drill
Objective:	Reduce cycle time	RPM	480	545
Industry:	Oil & Gas / Petrochemical	Speed Rate	67.06 m/min (220 SFM)	76.20 m/min (250 SFM)
Part:	Fluid end frac block	Feed Rate	0.13 mm/rev (0.005 IPR)	0.20 mm/rev (0.008 IPR)
Material:	15-5 PH stainless steel	Penetration Rate	60.96 mm/min (2.4 IPM)	111.76 mm/min (4.4 IPM)
Hole Ø:	44.45 mm (1.75")	Total Part Cycle Time	500 sec	272 sec
Hole Depth:	508.00 mm (20.00")	Tool Life	30 holes	60 holes
Tolerance:	+/- 0.127 mm (0.005")	T-A Pro offered 58.82% cost per hole savings over the competitor tooling.		
Required Surface Finish:	3.2 µm (125 Ra µin)

Item No. TAM3-44.45

45.60%
cycle time decrease

The ISO-specific AM460 coated T-A Pro insert provided:

- ✓ Increased tool life.
- ✓ Decreased cycle time.
- ✓ Decreased cost per hole.
- ✓ Increased penetration rate.

Case Study

Need a solution with better tool life?

Our customer was machining engine block parts from ductile cast iron in a production cell. The replaceable tip drill they were using wasn't providing the results they needed, so they began searching for a tooling solution that would decrease machine downtime and increase productivity.

The customer tested the **T-A Pro® high penetration replaceable insert drill** using the "K" (cast iron) geometry insert with Allied's multilayer TiAlN coating that provides increased abrasion resistance and tool life. The T-A Pro performed better than the customer had hoped.

Using the T-A Pro not only provided substantial tool life improvements, but it also increased the penetration rate by 30%. The previous tooling had a tool life of 1700 holes, but the T-A Pro increased that life to 3400 holes. This allowed the customer to increase their productivity.

In conclusion: Our customer was able to achieve £50k in tool savings per year with massive improvements in throughput. The advantage of the T-A Pro allowed our customer to achieve their tooling goals.

Product: T-A Pro Objectives: (1) Decrease machine downtime (2) Increase productivity Industry: Automotive Part: Engine block Material: Ductile cast iron Hole Ø: 16.00 mm (0.6299") Hole Depth: 241.00 mm (9.50")	Measure	Competitor Replaceable Insert Drill	T-A Pro Drill
	RPM	1819 RPM	2092 RPM
	Speed	91 m/min (300 SFM)	105 m/min (345 SFM)
	Feed Rate	0.20 mm/rev (0.008 IPR)	0.23 mm/rev (0.0092 IPR)
	Penetration Rate	369.57 mm/min (14.55 IPM)	488.95 mm/min (19.25 IPM)
	Cycle Time	39 seconds	29 seconds
	Tool Life	1700 holes	3400 holes

**The cast iron TiAlN coated
T-A Pro insert provided:**

- ✓ Doubled tool life.
- ✓ Decreased machine downtime.
- ✓ Increased productivity.
- ✓ 30% increased penetration rate.
- ✓ Increased tool savings per year.

Tighten the TORX Plus screws to the recommended torque value specified in the catalogue by series. A preset TORX driver is available to assure that the proper torque is applied.

T-A Pro Drilling System Information

T-A Pro Drill Inserts

Carbide Geometries

P - Steels

- Designed to provide increased penetration rates and tool life in steel applications
- Superior geometry and edge provides excellent chip control
- Allied's multilayer AM300® coating increases heat resistance and improves tool life

P

K - Cast Irons

- Uniquely designed for cast/nodular iron applications
- Geometry developed for maximum tool life, reduced exit burr and improved hole finish
- The multilayer TiAlN coating provides increased abrasion resistance and tool life

K

N - Nonferrous Materials

- Designed for applications in aluminium, brass and copper
- The geometry yields excellent chip control in these softer materials
- TiCN coating gives the versatility to run in a variety of materials while reducing buildup

N

M - Stainless Steel*

- Designed for all stainless steels and heat-resistant superalloys
- Geometry optimised for improved chip formation while minimising exit burr
- Allied's new AM460 coating provides industry-leading tool life in stainless and HRSA materials

M

*Available in Z -3 series only.

Advanced Design Capabilities

The advanced T-A Pro insert combines a coating and geometry specifically designed to achieve optimal results in ISO material drilling applications. With quick connectivity to existing T-A drill insert holders, the T-A Pro insert can be interchanged with previous T-A inserts with ease, resulting in minimal setup times so you can immediately increase your productivity.

T-A Pro inserts connect with:

T-A Pro holders

T-A holders

High-Speed Steel Geometries

X - High-Speed Steel Materials

- Improved chip geometry for excellent chip control in all materials
- Long tool life and high-process security for the most challenging applications
- Allied's multilayer AM200® coating combines excellent heat resistance and high lubricity for wide application use

X

NEW point geometry

NEW flute design for increased chip evacuation

T-A Pro Drill Holders

Straight flutes.

Proprietary coolant outlets improve coolant flow.

Provides increased insert life.

Inserts sold in multiples of 2.

Sub Series Holders (A, B, C, D)
Sub series holders are recommended when running carbide inserts toward the upper end of the series drill range, as well as in tougher applications requiring more insert support and holder strength. **NOTE:** Only specified sub series inserts should be used with equivalent or smaller sub series holders.

Inserts sold in multiples of 2.

Sub Series Holders (A, B, C, D)
Sub series holders are recommended when running carbide inserts toward the upper end of the series drill range, as well as in tougher applications requiring more insert support and holder strength. **NOTE:** Only specified sub series inserts should be used with equivalent or smaller sub series holders.

Inserts sold in multiples of 2.

Sub Series Holders (A, B, C, D)

Sub series holders are recommended when running carbide inserts toward the upper end of the series drill range, as well as in tougher applications requiring more insert support and holder strength. **NOTE:** Only specified sub series inserts should be used with equivalent or smaller sub series holders.

Inserts sold in multiples of 2.

Sub Series Holders (A, B, C, D)
Sub series holders are recommended when running carbide inserts toward the upper end of the series drill range, as well as in tougher applications requiring more insert support and holder strength. **NOTE:** Only specified sub series inserts should be used with equivalent or smaller sub series holders.

⚠ WARNING Tool failure can cause serious injury. To prevent:

- When using holders without support bushing, use a short T-A Pro holder to establish an initial hole that is a minimum of 2 diameters deep.
- Do not rotate tool holders more than 50 RPM unless it is engaged with the workpiece or fixture.

Visit www.alliedmachine.com/DeepHoleGuidelines for the most up-to-date information and procedures.

Factory technical assistance is available for your specific applications through our Application Engineering department. email: ufficiotecnico@febametal.com

IMPORTANT: The speeds and feeds listed above are a general starting point for all applications. Refer to the coolant recommendation chart for coolant requirements to run at the recommended speeds and feeds. Factory technical assistance is available through our Application Engineering department. For 7xD, 10xD, 12xD and 15xD holder lengths, see adjustment example above.

7xD and 10xD Adjustment Example (0.80 Adjustment)

Data • Adjustment Value	Speed/Feed (7xD)
200 SFM • 0.80	= 160 SFM
0.008 IPR • 0.80	= 0.0064 IPR

12xD and 15xD Adjustment Example (0.70 Adjustment)

Speed • Adjustment Value	Speed/Feed (12xD)
200 SFM • 0.70	= 140 SFM
0.008 IPR • 0.70	= 0.0056 IPR

Coolant Recommendations

Series	Stub, 3xD, 5xD		7xD, 10xD		12xD, 15xD	
	Pressure PSI	Flow Rate GPM	Pressure PSI	Flow Rate GPM	Pressure PSI	Flow Rate GPM
Y	450	4	550	6	650	8
Z	450	4	550	6	650	8
0	350	6	450	9	550	12
1	300	8	400	10	500	12
2	250	10	350	13	450	16
3	200	12	300	14	400	18

⚠ WARNING Tool failure can cause serious injury. To prevent:

- When using holders without support bushing, use a short T-A Pro holder to establish an initial hole that is a minimum of 2 diameters deep.
- Do not rotate tool holders more than 50 RPM unless it is engaged with the workpiece or fixture.

Visit www.alliedmachine.com/DeepHoleGuidelines for the most up-to-date information and procedures.

Factory technical assistance is available for your specific applications through our Application Engineering department. email: ufficiotecnico@febametal.com

IMPORTANT: The speeds and feeds listed above are a general starting point for all applications. Refer to the coolant recommendation chart for coolant requirements to run at the recommended speeds and feeds. Factory technical assistance is available through our Application Engineering department. For 7xD, 10xD, 12xD and 15xD holder lengths, see adjustment example above.

	K _m	= specific cutting energy (kPa)
	DIA	= diameter of drill (mm)

BSP and ISO 7-1

Tap Size	Tap Drill Size	Decimal Equivalent	* Theo % Thread	Probable Mean Oversize	Probable Hole Size	** Probable % Thread
1/4-19	7/16	0.4375	—	0.075 mm	11.19 mm	—
3/8-19	37/64	0.5781	—	0.075 mm	14.76 mm	—
1/2-14	23/32	0.7188	—	0.075 mm	18.33 mm	—
3/4-14	15/16	0.9375	—	0.075 mm	23.89 mm	—

* Based on nominal tap drill diameter

** Based on 0.075 mm probable mean oversize

To calculate the percent of full thread for a given hole diameter:

$$\% \text{ Thread} = \frac{76.93}{\text{Pitch (mm)}} \cdot (\text{Basic major diameter} - \text{Drill hole size})$$

Notes

- The above tap drill information represents probable thread percentages for the standard tap drills stocked at Allied Machine. Special insert diameters may be required in order to meet a user specific percentage of thread requirement.
- The 0.075 mm probable mean oversize hole condition is based on optimum cutting conditions. Probable percent of full thread may vary based on less ideal cutting conditions.
- The table and equations on this page are found in the *Machinery's Handbook*. Permission to simplify and print the equations is granted by the editor of the *Machinery's Handbook*.

Deep Hole Drilling Guidelines

T-A Pro | 10xD, 12xD and 15xD Holders

A

DRILLING

1. Pilot Hole

100 % RPM
100% mm/rev (IPR)

Establish the pilot hole using the same diameter short drill to a depth of 2xD minimum. Utilise a pilot drill with the same or larger included point angle.

Coolant ON

2. Feed-in

50 RPM max
300 mm/min (12 IPM)

Feed the longer drill within 1.5 mm (1/16") short of the established pilot hole bottom at a **maximum of 50 RPM** and 300 mm/min (12 IPM) feed rate.

Coolant OFF

B

BORING

3. Deep Hole Transition Drilling

50 % RPM
75% mm/rev (IPR)

Drill additional 1xD past the bottom of the pilot hole at 50% reduction of recommended speed and 25% reduction of recommended feed. Minimum of one second dwell is required to meet full speed before feeding.

Coolant ON

4. Deep Hole Drilling - Blind

100% RPM
100% mm/rev (IPR)

Drill to full depth at recommended speed and feed for longer drill according to Allied speed and feed charts. **No peck cycle recommended.**

Coolant ON

E

THREADING

5. Deep Hole Drilling - at Breakout

50% RPM
75% mm/rev (IPR)

For through holes only:

Reduce speed by 50% and feed by 25% prior to breakout. Do not break out more than 3 mm (1/8") past the full diameter of the drill.

Coolant ON

6. Drill Retract

50 RPM max

Reduce speed to a **maximum of 50 RPM** before retracting from the hole.

Coolant OFF

X

SPECIALS

1. WARNING Tool failure can cause serious injury. To prevent:

- When using holders without support bushing, use a short T-A Pro holder to establish an initial hole that is a minimum of 2 diameters deep.
- Do not rotate tool holders more than 50 RPM unless it is engaged with the workpiece or fixture.

Visit www.alliedmachine.com/DeepHoleGuidelines for the most up-to-date information and procedures.

Factory technical assistance is available for your specific applications through our Application Engineering department. email: ufficiotecnico@febametal.com

Troubleshooting Guide

	Potential Problem																			
	Accelerated corner wear	Barber pole	Bell-mouth hole	Insert chipping	Blue chips	Built-Up Edge (BUE)	Chatter	Chip packing	Chipping of point	Damaged or broken tools	Excessive margin wear	High flank wear	Hole lead off	Hole out of position	Hole out of round	Over-size hole	Poor hole finish	Poor tool life	Power spikes - Load meter	
Setup Condition	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	Possible Solutions
Worn or misaligned spindle (lathe, screw machine, chucker)	1	2	3				7		9	10	11		13			16	17			- Align spindle and turret or tailstock. - Repair spindle.
Use of low rigidity machine tools		2	3	4			7		9	10			13	14						Reduce penetration rate to fall within the physical limits of the machine or setup (NOTICE: Do not reduce feed below threshold of good chip formation).
Poor work piece support		2		4			7			10	11				15		17			- Provide additional support for the work piece. - Reduce penetration rate to fall within the physical limits of the machine or setup (NOTICE: Do not reduce feed below threshold of good chip formation).
Flood coolant, low coolant pressure, or low coolant volume	1				5	6		8		10		12				16	17	18	19	- Run coolant through tool holder when drilling greater than 1xD. - Increase coolant pressure and volume through the tool holder. - Reduce penetration rate to fall within the coolant limitations (NOTICE: Do not reduce feed below threshold of good chip formation). - Add a peck cycle to help clear chips.
Interrupted cuts. Entry or exit surfaces that are not perpendicular to the spindle (draft angles, parting lines, curved or stepped surfaces, cross holes and cast or forged surfaces)				4			7		9	10	11		13	14	15	16	17	18		- Pre-mill (spot face) entry or exit surface to remove interruption. - Decrease feed as much as 50% through entry or exit interruption. - Use short holders in low impact entry cuts.
Material harder than expected or running tools beyond recommended speed	1				5	6				10		12						18		- Reduce speed. - Increase coolant pressure and volume. - Improve coolant condition by use of quality products and regular maintenance.
Poor material micro-structure or foreign particles (forgings and castings that have not been normalised or annealed, poorly prepared steel, flame cut parts and sand casting)				4		6				10		12	13					18		- Compare performance of other tools for similar wear problems, which may indicate poor micro-structure. Anneal or normalise parts to improve micro-structure for machining. - Reduce feeds (NOTICE: Do not reduce feed below threshold of good chip formation).
Poor chip control								8		10	11		13			16	17	18	19	- Increase feed to recommended levels. Contact Allied's Application Engineering group for technical recommendations. - Increase coolant pressure and volume. - Improve coolant condition by use of quality products and regular maintenance.
Spot drilled holes with included angle less than that matching T-A Pro or cored holes	1			4			7						13					18		- Spot hole with short tool of same or greater included angle as T-A Pro drill insert. - Reduce feed (NOTICE: Do not reduce feed below threshold of good chip formation). If possible, drill from solid.
